The dial was originally in the north-west corner of the playing field, but has now been moved to a position south of the Cavendish Building. The pedestal stands on a thin stainless steel base with, round the edge, 'This dial given by past and present members of the College commemorates its recognition as an Approved Society of the University of Cambridge'. Inside this is the motto 'Time the Destroyer is Time the Preserver' (TS Eliot, Four Quartets).

The dial plate is in the form of an incomplete chapter ring, with hour lines extending right across. The diameter at the 6–6 line is 485 mm.

Dial plate is 640 mm above the ground. Hour numerals for 5am to 7pm are marked by dots on either side of the hour lines.

The gnomon and the pedestal are in one piece, and the gnomon is pierced by a circular hole.

The dial was designed by Philip Turner of the Cambridge University Department of Engineering.

Beautiful in its simple clarity, this vertical declining dial was delineated by Frank King to grace the south east wall of the Foundress Building. It won the BSS prize for the best new dial in the Millennium Year. The wall's declination of 25 deg east has given the diallist scope for an expressively asymmetrical design.

This striking set of six dial faces comprises arguably the best sundial in Cambridge. Replacing at least one earlier dial, it was erected over the Gate of Honour to mark the fourth centenary of the refounding of the College by Dr Caius in 1557. One side is open to view from Senate House Passage but the other side is restricted.

Two Fellows of the College, Dr. Powell and Dr. Message, were closely concerned with the design and lay-out. The casting of the dial plates was carried out by Birmingham Guild Ltd.
